Janet 3G eduroam interoperablity authentication methods

A truly unique feature of Janet 3G was its capability to support authentication against the same backend systems as your eduroam service. All of the major (non-client certificate based) EAP methods are supported. This can result in major savings on the cost of user account administration.

Implemented core authentication methods:

PAP/CHAP

MSCHAPv1

MSCHAPv2

PEAPv0/MSCHAPv2

EAP-TTLS/PAP

EAP-TTLS/MSCHAPv2

EAP-TTLS/EAP-GTC

EAP-TTLS/EAP-MD5
