

Revoke a certificate

Revoking a Certificate

Sectigo Certificate Manager 2024

How to: Revoke a Certificate

You may need to revoke a certificate for the following reasons:

- Certificate is no longer needed
- Certificate/private key has been compromised
- Certificate was created for testing purposes
- Certificate was requested in error

If you revoke a certificate within 14 days of it issuing, then this will not count as a billable certificate.

You can revoke a certificate by logging into the Sectigo Portal > Certificates > Select the certificate you would like to revoke > Select the revoke button and follow the onscreen step.

Once revoked, this certificate will immediately stop working.

If you have any issues or questions regarding revoking certificates, please email certificates@jisc.ac.uk ^[1] for assistance.
