Simulated Phishing and Associated Training Framework

Group:

** Please be advised that the Jisc Community site is due to be decommissioned shortly.

This will mean that this group will no longer be accessible to obtain a copy of the Buyer's Guide or any of the other documentation relating to the Framework.

Information on each of the live Jisc Frameworks can be found at www.jisc.ac.uk/frameworks [1] along with the latest version's of the Buyer's Guides. Details on who to contact should you need any further assistance will be found in the individual Buyer's Guides. **

*** New service - launched end of May 2017 ***

The cybersecurity landscape is constantly changing – phishing and ransomware are compromising organisations and people every day.

Cyber threats – phishing, malware, ransomware can go undetected for days, weeks and months. The impact can be considerable with data leakage/loss, network outages, financial loss and reputational damage.

Even with heavy investments in your security infrastructure, the weakest and most vulnerable level of defence in your organisation are your users. Many of the recent successful cyber attacks which have crippled organisations have been as a result of phishing.

Jisc have worked with Khipu to offer a single supplier framework saving you time and money finding a high quality, customisable training course to help HE and FE institutions further protect themselves.

About the framework

This framework agreement has been set up by Jisc for Cybersecurity awareness training.

The scope of the framework covers purchases by Jisc, higher education institutions, further education, specialist colleges and Research Council establishments in the UK, and by any other bodies whose core purpose is to support or advance further, higher education or research.
