Customer-owned routing equipment

The Managed Router Service can be offered on customer-owned routing equipment, subject to agreement of the Janet Network Engineering Group. In this situation router maintenance will not be covered by the Managed Router Service terms and the customer will be responsible for maintaining the router.

Customers should be aware that once Jisc take on the management of the routing equipment the site will no longer have access to make any configuration changes.

Member and customers wishing to provision and manage their own router may be able to use the <u>Jisc's Network Equipment Framework [1]</u> for an OJUE compliant efficient way to purchase routing equipment.
